

Adapt and Migrate with MOVE

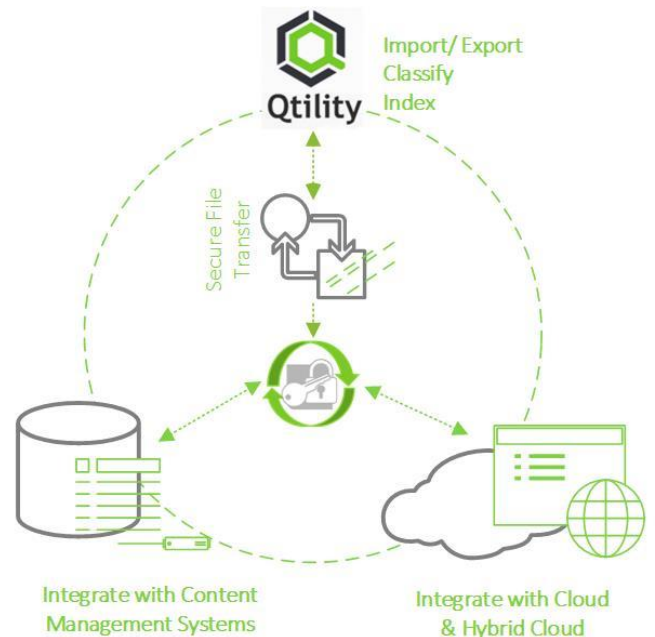

ECM Migration and Integration Made Easy

Adaptors

- Reusable ECM and application adaptors
- Share Drive adaptors
- Configurable database adaptors
- Create an adaptor

Export, Import, Replicate, Test, Sync

- Export to or from a network share drive
- Stream content and data directly
- Compose emulations for high volume ingestion performance testing
- Synchronize (sync) data and content between systems
- Safely build test repositories

Features

Save time and resources on installation

Use internal IT resources to quickly deploy a solution

Installs in minutes

Self discovers environment settings

Easy 5 minute movement configuration

Create a login, select source / target and set options in as little as 5 minutes

Use internal IT resources to configure movements

Flexible configuration options

Select multiple folders and or DQL statement sources

Map folder path locations with trimming

Metadata selection and mapping *

Security replication

Replace original content with small placeholder files

Clear target folder locations

Reliable

Full audit / journal of movements

Stop / resume capability

Detailed movement status dashboard

Respects repository business rules

Versatile

Re-useable and editable movements

Export to OS

Import from OS

Move directly to repositories

Branding, customizable options and transformations **

Multi-tenant, cloud capable *

Web services API available

Runs within app or browser

Multiple ECM system adapters
